### Product Details

Cold lamination film is transparent PVC with adhesive glue.

According to the surface texture, can be sorted as: glossy film, matt film, and special film.

It is used for covering the eco-solvent printed pictures to protect the picture.

Nowadays, glossy film and matt film is most used in advertising industry.

Some solutions:

Solution 1:

picture not so clearly after cold lamination film applied:

1. lamination machine pressure not enough: adjust the pressure of the machine
2. lamination machine two side not in same level: adjust the lamination machine
3. photo paper surface not smooth: in temperature 25 degree centigrade, wait 2-3 hours
4. adhesive not good in low temperature: change another cold lamination film

Solution 2:

There is bubble after laminated:

The glue is not good: change another cold lamination film
