Product Details

PVC reflective banner is made of honey comb reflective film applied onto polyester knitted fabric. It's mainly used as road signs.

The function and characteristics of reflective printing cloth:

1. super reflective intensity:

The reflective technology is based on the micro crystal lattice full reflection. strong reflective intensity, typical reflective intensity can reach 300cd/lx/m²

2. Can be printed directly. The PVC polymeric surface with high ink absorption, can be printed directly.

3. Easy to use: The base fabric is the same as it's in the PVC banner. Can be easily printed and installed

Main product:

DR3900: base fabric 300D*500D. Honey comb.
