Product Details

3D carbon fiber vinyl is widely used for car decoration.

This is by far the most popular 3D Twill-Weave Carbon fiber style vinyl sheet, without the high cost of actual carbon fiber. This unique product is made of UV resistant vinyl that features a carbon textured finish. Unlike those cheap carbon pattern printed, the true 3D texture resembles the genuine look of dry carbon fiber, the weave reflects light the same way as the actual carbon fiber would.

DERFLEX carbon fibers advantages

Durable in weather like rain, wind, frost, sun exposure

Easy to clean, cut, connect and install, water proof

Factory price, more economical with the same specification.

Made to order. We make different products for special usage, and different treatment for different climate environment.

Long outdoor life resistance.
